

## Cost-Effective, Technologically Driven Engineering Services

Operators Unlimited understands the engineering needs of wastewater treatment plant managers, operators and the processes they manage. We work with our customer partners to provide cost-effective, technologically driven engineering services. These best practice solutions maximize ROI while offering compliance for the most complex systems. From process reviews and lab studies, to controls, specialty projects and project engineering and design, Operators Unlimited systems and solutions offer maximum efficiency and minimal environmental impact.

### Controls

Operators Unlimited works with our customer partners to identify your control needs and design a system that increases safety, compliance and overall process efficiency. Based upon the control objectives and parameters of the facility, OU engineers isolate areas where controls can be utilized for process improvements or can implement a comprehensive plant-wide system that integrates all areas into one central command.

### Lab Studies

System performance issues present themselves in a variety of ways. Operators Unlimited lab studies and pilot studies offer clarity into your process. Our process engineers will conduct a lab study and provide solutions to the issues you are experiencing.

#### •What do Lab Studies Offer?•

- Reduced operating costs
- Solve under-sizing issues from a process standpoint and not design/build
- Pinpoint and offer solutions to compliance issues
- Maximize plant capacity

## Specialty Projects

Circumstances often arise that require a system evaluation, upgrade or redesign. Examples include plant line additions that affect the wastewater plant, plant shut down maintenance, routine maintenance or plant closure assistance. Whatever the need, Operators Unlimited can evaluate, manage and deliver your wastewater specialty project on time and on budget.

## Managed Care Program

A total outsourced option for Plant Managers, resulting in one invoice for the wastewater plant, increased ROI and compliant process peace of mind. OU handles everything from plant operations, chemicals and solids disposal to sampling, analysis, reporting and regulatory compliance. All resulting in the freedom to focus on your primary business.
